EOS Pipe series

FINEST SAUNA ENGINEERING

Passion for Spa and Wellness Engineering

Passion for spa and wellness engineering is deeply rooted at EOS and can be felt in each of our products. An EOS product arouses desire and forms the basis for a place of relaxation. EOS products convey pure elegance and luxury. They combine aesthetics, quality and functionality in equal measure.

The passion for spa and wellness engineering has always been our motivation. Since the foundation in 1944, our company has experienced a rapid and steady development. From market leader for design sauna heaters, EOS has developed into the luxury brand for spa and wellness hardware for private and commercial use with a large range of sauna heaters, infrared and steam room equipment, the corresponding control units and a wide range of accessories.

However, the focus of our activities has always been the idea to realize high-quality spa and wellness hardware with which wellness oases can be equipped to meet the highest demands.

Our recipe for success are contemporary, technically innovative products of the highest quality, with a trend-setting and, if desired, extravagant design.

EOS products are sold in over 80 countries worldwide. They are the result of intensive engineering, the use of highest quality materials and the most careful manufacturing. We focus on the combination of modern production facilities and elaborate craftsmanship.

Our products are manufactured exclusively in our manufactory in Driedorf, Germany. On site we have the opportunity to expand the know-how of our employees over the long term, thus permanently manifesting the highest level of quality. It is therefore a standard procedure that each individual product is subjected to extensive tests before delivery. Our products impress with maximum durability and contribute to a unique sense of well-being through the combination of functionality and design.

EOS Pipe

Smart elegance –
as unique
as it is innovative

A design statement for special requirements

The sauna heater series EOS Pipe appears to be smart and powerful at the same time. The slim design guarantees small space requirement.

The outer shell made of 4mm thick metal pipe with 3D laser-cuts not only gives the EOS Pipe its striking appearance, but also ensures a regular heat distribution in the sauna cabin.

The cylindrical, round shape reclines in harmony. A sauna heater with flowing contours as a contrasting design statement in otherwise straight-lined sauna cabins. The special lightness of the design is enhanced by the wall-mounted installation with a small distance to the wall.

There are two mounting options to choose from – flat on the wall or smartly in the corner of a sauna cabin with the included corner console.

More variety – more freedom of design

As a design statement in the sauna, the EOS Pipe contributes significantly to the perfect design of small sauna cabins.

Its decent but compact design, its timeless but, at the same time, elegant look makes the EOS Pipe a masterpiece of sauna engineering.

Whether in an elegant deep black matt, a timelessly elegant anthracite pearl effect or an accentuating red-brown powder coating in "Rust Marble", the EOS Pipe sauna heater fits seamlessly into any sauna cabin ambience. A symbiosis of shape and colour that couldn't be more fitting.

Despite its compact design, the EOS Pipe sauna heater series offers a stone volume of 10kg and ensures an optimal sauna climate in small sauna cabins up to approx. 4,5m³.

The EOS Pipe is available as variant with and without integrated control unit. The integrated control unit promises a wonderfully relaxing sauna bath. The high-quality aluminum knobs can instantly be used to regulate the temperature and

time of the sauna session. Alternatively, the sauna heater can also be operated with an external control unit.

The compact convection sauna heater surprises with its enormous radiant heat, which is second to none.

The right feel-good climate is the result of precisely coordinated details and functionalities.

Safety and design in harmony

Safety without compromise is ensured by the optional heater guard rail made of metal, which is adjusted to the colour of the sauna heater. The design language of the heater guard rail is completely coordinated with the design of the outer shell and is consistently continued. Thanks to its round, curved shape, it fits harmoniously into the round contour of the outer shell.

This heater guard rail is characterized by maximum safety and a harmonious overall appearance at the same time.

Thanks to the directly connected power plug, the EOS Pipe can be easily connected to a regular socket outlet so that the sauna pleasure can start immediately.

Thanks to the EOS Pipe you can immerse yourself in the world of pure relaxation and recreation -innovation, quality and style made in Germany combined for the ultimate sauna experience.
